

## **ProcessMaker launches its Enterprise Edition to provide improved management tools, scalability, and support for demanding BPM applications**

*For organizations that depend on ProcessMaker for critical workflow and BPM needs, the new professional edition is the answer.*

**Brooklyn, NY – Aug 3, 2010** – Colosa has launched a new fully supported commercial version of its workflow and business process management (BPM) software, ProcessMaker Enterprise Edition. Available immediately through Colosa and its global partners, the software is the company's response to demands from the ProcessMaker community for a supported and enterprise scale version of the software.

ProcessMaker Enterprise Edition is a highly scalable, well supported, and user-friendly web-based application that helps business and technology users manage business processes more efficiently and effectively. Business analysts can design processes using an intuitive interface that doesn't require programming. An intuitive inbox allows employees to start new form driven processes or complete tasks passed to them by other users. Thanks to ProcessMaker, IT departments can now code less and better service the workflow needs of growing organizations.

Brian Reale, CEO of Colosa, explained: "An increasing number of large businesses have come to us looking for better support and more management tools for the ProcessMaker open source BPM software. We have found that our customers are using ProcessMaker in more and more critical applications, and they are scaling to support larger numbers of users. As businesses begin to depend more on ProcessMaker, they need higher service level guarantees, better reporting, and stronger tools for managing their data. ProcessMaker Enterprise Edition responds to these needs."

ProcessMaker Enterprise Edition builds on the capabilities and success of the open source community edition of the software which has been downloaded more than 150,000 times. The Enterprise Edition builds on the easy-to-configure-and-deploy software with features for enterprise-scale, production ready applications.

These features include advanced LDAP and Active Directory synchronization, multi-tenant management tools, and visual backup and restore features. Additionally, thanks to a connector to Pentaho™ BI, companies enjoy embedded dashboards and ad hoc reporting. Business managers can find bottlenecks and forecast and model their staffing resources—such as different shift cycles—to improve resource allocation and business outcomes, including increased profits.

"The Enterprise Edition integration with Pentaho allows us to deliver a world-class SaaS solution that combines automated workflow and business analytics," said Jim Spiccuza, CEO of Ed Automate, a company that helps school districts dramatically reduce paper-based processes. "With its intuitive administration interface and the multi-tenant architecture, we can easily and

---

cost-effectively provide the highest quality customer support.”

**About ProcessMaker**

ProcessMaker workflow management software allows public and private organizations to automate form intensive, approval-based processes across departments and systems, including human resources, finance, marketing and sales, and operations. Business users and subject matter experts with no programming experience can design and run workflows, continuously improving process effectiveness and efficiency and radically reducing paperwork. ProcessMaker software has been implemented in a variety of industries including finance, telecommunications, manufacturing, and state and local government.

ProcessMaker is developed by Colosa Inc., a developer of software solutions that enable companies to simplify workflow through the design and automation of business processes. Colosa enjoys a network of global partners that can implement and support ProcessMaker software for organizations of all sizes.
