

Colosa teams with E-Lock to add mobiSigner Digital Signature Capabilities to ProcessMaker® Enterprise Edition Workflow and BPM

E-Lock powered digital signatures have been added to ProcessMaker to allow Enterprise clients to securely authenticate forms, documents, and transactions

Brooklyn, NY and Washington, D.C. – September 28, 2010 –Colosa continues its commitment to improving both efficiency and security in enterprise workflow management by adding industry leading digital signature capabilities to ProcessMaker. Colosa has teamed up with DC based E-Lock, a global provider of electronic signature solutions, to create an integration which allows customers to use mobiSigner digital signatures with the ProcessMaker's Enterprise Edition. ProcessMaker customers can now add true digital signatures in their workflows. E-Lock's mobiSigner will be a feature offered exclusively for ProcessMaker Enterprise Edition customers.

Thanks to the mobiSigner, ProcessMaker users can now design online forms using a new field type called Digital Signature Authentication Field which will prompt a user to digitally sign a form before passing the case to a subsequent user. A user that wants to digitally sign a form must first authenticate against the E-Lock mobiSigner certified digital signature database provided with the mobiSigner software. Besides signing on-line forms inside ProcessMaker, mobiSigner can also be used to digitally sign PDFs that are dynamically generated as part of a ProcessMaker Workflow.

“The addition of mobiSigner digital signatures also provides a new level of confidence and security for enterprise clients deploying ProcessMaker for mission critical end-to-end business processes such as credit authorizations, loan approvals, government licensing, and much more,” explained Hugo Loza, ProcessMaker Product Manager.

The integration is available in version 1.8 or later of ProcessMaker and works with version 1.0 of E-Lock mobiSigner. Enterprise Edition trial customers of Processmaker will also be able to test this functionality in the ProcessMaker Enterprise Edition 30 day cloud trial.

“Workflow management has emerged as one of the key components helping organizations achieve their goals. This integration of two of the best of the breed solutions – Colosa's Workflow management solution and E-Lock's electronic signature technology - seamlessly incorporates security aspects like authenticity and integrity, into workflow-based transactions,” said Mr. Aniruddha Shrotri, CTO and Co-founder, E-Lock. “This will bring real benefit to organizations by allowing them to perform and streamline their complex tasks in a secure way.”

Powered with E-Lock digital signature technology, ProcessMaker users can use this secure authentication mechanism in the workflows to automate and implement secure paperless processes.

Brian Reale, CEO of Colosa, said, “By adding digital signature capability to ProcessMaker, we continue to focus on our mission of providing organizations a simple, seamless, and secure way to automate their workflows on the web and eliminate paperwork. E-Lock is an innovator in the

field of Digital Signatures, and we are committed to extending the value of ProcessMaker through such partnerships.”

“The synergy of E-Lock and ProcessMaker creates a powerful, comprehensive and cohesive relationship that extends beyond product, service and customer,” said Dr. Prakash Ambegaonkar, CEO of E-Lock. “We look forward to this collaboration with ProcessMaker to further extend the power of E-Lock and ProcessMaker, in streamlining business processes, reducing costs and ensuring the continued success of our joint customers.”

About ProcessMaker

ProcessMaker workflow management software allows public and private organizations to automate form intensive, approval-based processes across departments and systems such as human resources, finance, marketing and sales, and operations. Business users and subject matter experts with no programming experience can design and run workflows, continuously improving process effectiveness and efficiency and radically reducing paperwork. ProcessMaker software has been implemented in a variety of industries including finance, telecommunications, manufacturing, and state and local government.

ProcessMaker is developed by Colosa Inc., a developer of software solutions that enable companies to simplify workflow through the design and automation of business processes. Colosa enjoys a network of global partners that can implement and support ProcessMaker software for organizations of all sizes.

About E-Lock

The E-Lock range of digital signature products is owned by Frontier Technologies Corporation (FTC), a privately held corporation headquartered in Washington DC. E-Lock is a leading provider of digital and electronic signature solutions, empowering businesses across the globe to go paperless conveniently and securely. While ensuring security and legal compliance, E-Lock’s dSig and eSig solutions provide an easy, user-friendly way to authenticate documents, content and transactions. E-Lock electronic and digital signature solutions can be integrated with any existing application, software or workflow.

E-Lock's untiring efforts have made it possible for organizations and professionals worldwide to secure and streamline their business processes. Our products have been instrumental in establishing the legal validity of digital signatures in a large number of countries, including USA.
