

Daytop enhances client intake program and ensures HIPAA compliance with open source ProcessMaker

Daytop Village of New Jersey (Daytop-NJ), a residential substance abuse treatment and education program, manages workflow for its intake and assessment programs with Colosa's ProcessMaker

Brooklyn, NY – June 11, 2009 – Colosa's open source business process management (BPM) software, ProcessMaker, that enables enterprises and public organizations to automate paper-based workflow processes, has been selected by Daytop-NJ to automate its core workflow processes and ensure compliance with the Health Insurance Portability and Accountability Act (HIPAA).

Daytop-NJ will rely on ProcessMaker, and support from its open source developer Colosa, to automate its processes, gain access to client data and update underlying workflows. As a leader in the field of substance abuse, Daytop-NJ has a commitment to reach the highest standards in safeguarding the security and privacy of its clients' data, and comply with the Health Insurance Portability and Accountability Act (HIPAA). It has selected ProcessMaker to help deliver on these needs.

Headquartered in New York City, Daytop Village is one of the oldest and largest drug rehabilitation facilities in the US and has helped treat many clients since its inception in 1963. The adolescent program in New Jersey is designed to emphasize positive peer interaction in a therapeutic community model. The professional staff are experts in psychology, social work, medicine and education.

Organizations rely on ProcessMaker to automate intensive, approval-based processes such as Client or Employee On-boarding, Engineering Change Orders, RMA systems, Credit workflows, marketing approval workflows, purchase requests, and much more. ProcessMaker is an entirely web-based commercial open source software suite and is offered as a free download with enterprise support plans available.

Jordana Zeger, Vice President and CFO from Daytop-New Jersey, said: "Our mission is to deliver a comprehensive substance abuse treatment and education program to our male and female adolescents. We needed a system that would provide us with a simple to install and use way of managing our processes. ProcessMaker will expedite the process of client intake and assessment, and will give us a new level of access and visibility of all data and the underlying workflows."

Daytop-NJ may initially use ProcessMaker to manage its intake and assessment program and will later extend its use to automate additional critical processes. The software will integrate with signature pads to provide an easy way to capture the proper signatures.

Brian Reale, CEO of Colosa, said: "Daytop-New Jersey is a cause that we personally believe very strongly in at Colosa. It is great to be able to help the organization handle its clients' processes in an efficient and rapid way."

About Colosa/ProcessMaker

Colosa is a developer of software solutions that enable companies to automate approval based workflow processes by interconnecting people and systems seamlessly across the organization.

The company's flagship product, ProcessMaker® (www.processmaker.com) is available as a free open source application. Enterprise clients can purchase ProcessMaker's Enterprise support plan which includes SLAs, IP indemnification, upgrade support and more. ProcessMaker is an AJAX enabled, SOA, web-based application that allows users across single and multiple sites to create and share workflows, create custom forms, route processes, and improves management control. ProcessMaker OSS is available for download at <http://sourceforge.net/projects/processmaker/> and more information is available at www.processmaker.com.

Colosa was founded in 2000 and has customers in local and central government, telecom, oil & gas, insurance, banking, and other industries. Colosa has offices in Brooklyn, NY; La Paz, Bolivia; and Lima, Peru.
