

ENTERPRISE WORKFLOW PLATFORM

Is your organization equipped to achieve digital transformation?

Today organizations face a common obstacle to digital transformation. A mix of disparate legacy and point software systems and manual paper-based tasks lead to bottlenecks and costly inefficiencies across organizations. To overcome these challenges, organizations look to scalable workflow software to automate processes and connect their existing systems to their workflows with ease.

Using the ProcessMaker platform, business users can rapidly design and deploy solutions to complex workflow problems in hours, not months, with a low-code approach. By integrating and extending your existing systems on our platform, you drastically improve organizational efficiency. ProcessMaker works seamlessly to automate processes, reduce bottlenecks, and deliver true digital agility to your organization.

The ProcessMaker Advantage

ProcessMaker is dedicated to creating a seamless experience across your organization and its customers using the world's latest technologies. Workflows powered by ProcessMaker help organizations reach their full potential and that is always our goal.

Work smarter and transform redundant, manual tasks into intelligently automated workflows with our solution. All departments can collaborate on one platform to automate workflows and achieve your goals, from improving the customer experience to increasing organizational efficiency.

Automate workflows across your organization with the ProcessMaker platform.

Design solutions to complex business problems with low-code

Empower business users to solve line of business (LOB) automation challenges with a drag-and-drop workflow designer to create and deploy business processes without IT.

Connect and modernize existing systems

Integrate modern apps together with legacy systems to remove information silos in organizations using ProcessMaker. Modernize legacy systems, increase productivity and extend ROI on existing investments so you can deploy solutions faster and at a lower cost.

Built for collaboration

ProcessMaker allows different business teams to collaborate to build processes by sharing common building blocks such as forms, screens, scripts, and connectors to third party apps with preconfigured functionality. All elements of a process are version controlled to ensure strong life cycle management and good IT governance practices are met.

Always be improving

ProcessMaker helps organizations leverage the data their business processes generate to optimize their organizational efficiency using the latest technologies. ProcessMaker offers built-in reporting tools that give access to detailed reports, enabling managers and analysts to continuously improve performance by helping them discover and remove process bottlenecks and inefficiencies.

Harness AI to drive better outcomes

ProcessMaker makes it easy for organizations to incorporate cutting-edge technology, like machine learning, RPA, AI and IoT applications into their daily business processes. Machine learning and AI use data collected from workflows to find patterns and apply improvements that automatically optimize processes. ProcessMaker is purpose built to enable businesses to take advantage of robots and artificial intelligence inside their end to end processes to add dramatic gains in efficiency to any organization.

ProcessMaker's unique ability to give power to business users and developers alike, combined with its agile architecture and intuitive UX, serves to provide the best possible platform with low code delivery. By automating workflows and connecting legacy systems and newer point solutions through business processes, organizations operate more efficiently and continually improve.
